Prefice and Introduction

r markdown code block tricks

In this example, the backticks are used to encapsulate the LaTeX code, and it will be displayed as plain text in the output.

0.1 LaTeX Code Block that Renders

To create a LaTeX code block that renders and displays the content as formatted output, you can use the same syntax but without the outer backticks. Instead, you simply write:

0.1.0.1 Formula inline double dollar sign

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

0.2 LaTeX Code Block Example

To display the quadratic formula as a block equation, use the following syntax:

```
## [1] 2
```
